

## project Development Phase

Date	19 OCTOBER 2023
Team ID	ED14E0CE805D179835E48EA9C1BE5026
Project Name	ELECTRONIC VOTING SYSTEM
Maximum Marks	10 Marks

### Model Performance Testing:

Project team shall fill the following information when working for blockchain.

S.No.	Parameter	Values	Screenshot
1.	Information gathering	Setup all the Prerequisite:	<p>The diagram illustrates the workflow of the Electronic Voting System. It begins with a 'Voter UI' where a user provides their Name, Password, and selects a vote (A, B, or C). This information is converted into a 'TransactionID, Timestamp' (e.g., abdh53242412kjckelz...). The transaction is then broadcasted to a network of nodes, where all details are verified. Once verified, the 'Transaction (Vote)' is added into the blockchain, represented by a sequence of blocks. Finally, the 'Results' are displayed, and the voter can view them and trace back.</p>

2. Extract the zip files	Open to vs code	
--------------------------	-----------------	--

3.	Remix Ide platform  explorting	<p>Deploy the smart contract code</p> <p>Deploy and run the transaction. By selecting the environment - inject the MetaMask.</p>	
4	Open file explorer	<p>Open the extracted file and click on the folder.</p> <p>Open src, and search for utiles.</p> <p>Open cmd enter commands</p> <p>1.npm install</p> <p>2.npm bootstrap</p> <p>3. npm start</p>	
5	{LOCALHOST ADDRESS	IP  copy the address and open it to chrome so you can see the front end of your project.
